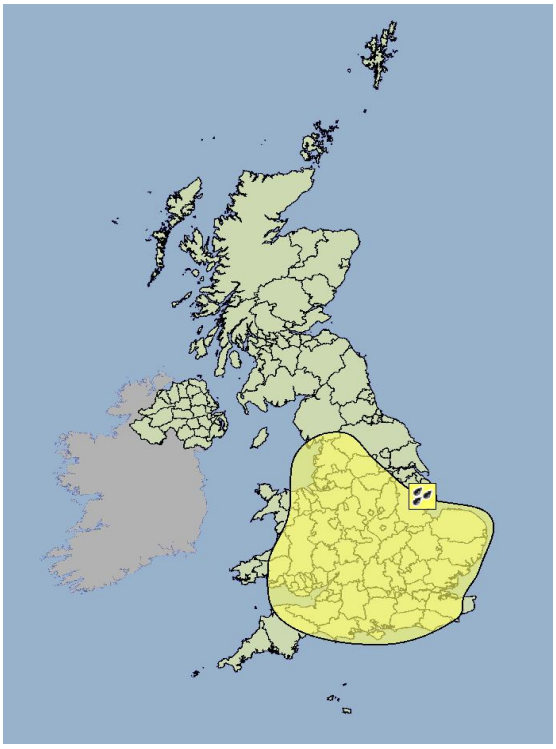
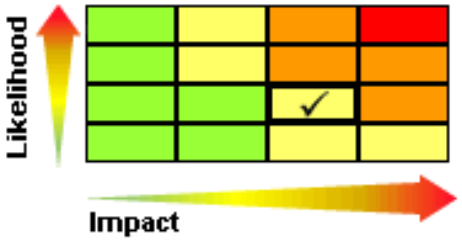
National Severe Weather Warning Service





Chief Forecasters Assessment
Although many places are likely to miss the worst of the rain, intense downpours associated with the thunderstorms may give over 30 mm in an hour locally and perhaps more than 50 mm in 2 or 3 hours. As is usual in this type of situation there is uncertainty in the worst affected areas.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **01:15 on Wed, 19th Jul 2017** until **22:00 on Wed, 19th Jul 2017**

Thunderstorms, with locally torrential downpours will continue to move north across England and Wales in the early hours of this morning. Although the thunderstorms will tend to ease from the south later in the night, further, possibly severe storms may break out again this afternoon, probably focused over parts of northeast Wales, central and northern England.

Although some places will miss the thunderstorms, there is a chance of localised sudden flooding of homes, businesses and roads.

Frequent lightning and large hail may be additional hazards, the latter bringing potential for disruption to power networks.

This warning has been updated to keep the risk going over southern England through the early hours of this morning.
